

Divide by: 64/65/72 triple modulus low power ECL prescaler

SA702

DESCRIPTION

The SA702 triple modulus (Divide By 64/65/72) low power ECL prescaler is used in synthesizer systems to achieve low phase lock time, broad operating range, high reference frequency and small frequency step sizes. The minimum supply voltage is 2.7V and is compatible with the CMOS UMA1005 synthesizer from Philips and other logic circuits. The low supply current allows application in battery operated low-power equipment. Maximum input signal frequency is 1.1GHz for cellular and other land mobile applications. There is no lower frequency limit due to a fully static design. The circuit is implemented in ECL technology on the QUBiC process. The circuit will be available in an 8-pin SO package with 150 mil package width and in 8-pin dual in-line plastic package.

DESCRIPTION OF OPERATION

The SA702 comprises a frequency divider circuit implemented using a divide by 4 or 5 synchronous prescaler followed by a 5 stage synchronous counter, see BLOCK DIAGRAM. The normal operating mode is for MC1 (Modulus Control) to be set high and MC2 input to be set low in which case the circuit comprises a divide by 64. For divide by 65 the MC1 signal is forced low, causing the prescaler circuit to switch into divide by 5 operation for the last cycle of the synchronous counter. For divide by 72, MC2 is set high configuring the prescaler to divide by 4 and the counter to divide by 18. A truth table for the modulus values is given below:

For minimization of propagation delay effects, the second divider circuit is synchronous to the divide by 4/5 stage output.

The prescaler input is positive edge sensitive, and the output at the final count is a falling edge with propagation delay t_{PD} relative to the

input. The rising edge of the output occurs at the count 32 with delay t_{PD} .

The MC1 and MC2 inputs are TTL compatible threshold inputs operating at a reduced input current. CMOS and low voltage interface capability are allowed.

The prescaler input is differential and ECL compatible. The output is differential ECL compatible.
